

DuPont Crop Protection  
8295 Tournament Dr, Suite 300  
Memphis, TN 38125

On August 31, the EPA issued conditional registration approvals for DuPont™ Aminocyclopyrachlor Technical and its various formulations for non-crop applications in the US vegetation management markets. These registrations represent a significant milestone in DuPont's efforts to bring to market new technology for managing hard to control weed and brush species. In 2011 we expect to bring to market four new brands based on this newly registered chemistry. These brands, DuPont™ Plainview™, DuPont™ Perspective™, DuPont™ Streamline™ and DuPont™ Viewpoint™, will offer our customers unique solutions for their bare ground, selective weeding and brush control needs.

Perspective™, Plainview™, Streamline™ and Viewpoint™ herbicides are developmental products for which applications have not yet been filed with EPA. These developmental products are not registered for sale and use in the United States, and no sale, offer for sale or use of these products may be made unless and until all necessary federal and state registrations have been obtained.
